

CAN WE GET TO YOUR HOUSE?

FACT: If your driveway is less than 12' wide (including brush, trees, landscaping, etc) the fire engines might not fit.

FACT: If the roadway serving your neighborhood is less than 20' wide (including brush, trees, landscaping, etc) there's not enough room for vehicles to pass each other – which makes emergency evacuations very difficult.

FACT: If we can't turn around, we'll also have to back in or out. That requires a spotter behind the engine. If the trees, brush, and landscaping along your driveway haven't been cut back *at least 4'* on each side (to provide an opening *at least 20'* wide), the operator won't be able to see the spotter and backing becomes very dangerous.

FACT: Fire engines are also very tall. If you have trees and branches overhanging your driveway, they need to be cut back to at least 13'6" from ground level.

Help us help you.

Make sure we can get to your home in the event of an emergency.
